Andy Fluor™ 555 Azide

Catalog Number	Packaging Size
C320	1 µmol

Storage upon receipt: -20°C, protected from light

Introduction

Click chemistry describes a class of chemical reactions that use bio-orthogonal or biologically unique moieties to label and detect a molecule of interest in mild, aqueous conditions. The click reaction involves a copper-catalyzed triazole formation from an azide and an alkyne. The azide and alkyne moieties can be used interchangeably; either one can be used to tag the molecule of interest, while the other is used for subsequent detection.

The Andy Fluor[™] 555 azide is reactive with terminal alkyne via a copper-catalyzed click reaction that allows the subsequent visualization by fluorescence spectroscopy.

Specifications

Label:	Andy Fluor™ 555	
Ex/Em:	553/565 nm	ΛΛ
Detection Method:	Fluorescent	Absorption
Solubility:	DMSO, DMF	Absol
Product Size:	1 µmol	
Storage Conditions:	-20 °C, protect from light	
Shipping Condition:	Room Temperature	300 350 400 450 500 550 600 650 700 750 800 Wavelength (nm)

Applications

Click chemistry labeling
